Archaeobacteria have evolutionary similarities to both eubacteria and eukaryotic organisms, such as humans. The domain bacteria contains the kingdom eubacteria and is known as true bacteria.

### **The Evolution of Prokaryotes: Archaeobacteria and Eubacteria**

Archaeobacteria are so named because biochemical evidence indicates that they evolved before the eubacteria and have not undergone significant change since then. The archaeobacteria generally grow in extreme environments and have unusual lipids in their cell membranes and distinctive RNA molecules in their cytoplasm. One group of archaeobacteria are the methanogens, anaerobic bacteria found in swamps, sewage, and other areas of
