Review Questions Answer KEY 1. Kinetic molecular theory is the theory that explains the motion of solids, liquids, and gases. 2. KMT explains the differences between properties of solids, liquids, and gases by examining how the particles are moving under similar conditions. 3. a. Solid - a phase of matter with a definite shape and volume.

Review Questions Answer KEY

A. Kinetic Molecular Theory (KMT) = the idea that particles of matter are always in motion and that this motion has consequences. 1) theory developed in the late 19th century to account for the behavior of the atoms and molecules that make up matter 2) based on the idea that particles in all forms of matter are

POSTULATES OF THE KINETIC MOLECULAR THEORY Gases consist of tiny particles (atoms or molecules). These particles are so small, compared with the distances between them that the volume (size) of the individual particles can be assumed to be negligible (zero). The particles are in constant random motion, colliding with the walls of the container.

9.5 The Kinetic-Molecular Theory - Chemistry

Kinetic Molecular Theory attempts to explain why gas molecules behave as they do. It is based off four central tenets. 1. Gaseous molecules have no volume 2. Collisions between gaseous molecules are elastic (no energy is gained or lost) 3. Gaseous molecules have no attraction with one another 4.
