K. Sridharan, T.R. Allen, in Molten Salts Chemistry, 2013. Abstract. Molten salts have long been considered as primary coolants and heat transfer media for nuclear energy systems because of their high boiling points, volumetric heat capacities, and thermal conductivities. The high solubility of fission products in molten salts provides a greater safety margin in molten salt-based reactor ...

Herein, we design a novel green molten salt route to synthesize K₂SiF₆:Mn⁴⁺ red powder using molten NH₄HF₂ salt instead of HF liquor as the reaction medium. The results show that KMnO₄ and MnF₂ could produce Mn⁴⁺ in NH₄HF₂ molten salt through a reduction reaction, and the resulting Mn⁴⁺-doped K₂SiF₆ exhibited a bright red emission peaked at 632 nm under blue light excitation.
